

NNA | Navigating the New Arctic CO Community Office

Supporting highly collaborative research toward a more resilient, healthy, and equitable Arctic that is understood and stewarded for its role in the global system

Navigating the New Arctic (NNA) is one of the National Science Foundation's (NSF) 10 Big Ideas. NNA projects address challenges in the rapidly changing Arctic using convergence research. This initiative aims to empower new research partnerships from local to international scales, diversify the next generation of Arctic researchers, enhance efforts in formal and informal education, and support co-production of knowledge with Indigenous Peoples.

The **Navigating the New Arctic Community Office (NNA-CO)** supports this mission by building awareness, partnerships, opportunities, and resources for collaboration and equitable knowledge generation within, between, and beyond the research projects funded by the NNA Initiative.

The NNA-CO serves the NNA community by offering support in four focus areas:

- Co-production of knowledge between research partners and Indigenous Peoples of the Arctic
- Convergence research—collaborative research that draws on expertise from across disciplines and knowledge systems to solve complex challenges
- Coordinated and culturally responsive education and outreach
- Open science approaches that promote and share resources for the openness, integrity, and reproducibility of NNA-funded research.

For information or questions about the NNA-CO, contact us by email at contact@nna-co.org.

The NNA-CO is a distributed office across three locations at Alaska Pacific University (APU), the University of Alaska Fairbanks (UAF), and the University of Colorado Boulder (CU Boulder). The NNA-CO is supported through a cooperative agreement (Award #2040729) with the National Science Foundation.
